3-4 years ago, the SMB fishing on the D from Easton to New Hope was very good. Over the past few years, I have seen less SMB and more trout and stripers.

theres your answer on the delaware, stripers. they are the native to the river and are just taking back what was theirs in the past. A 20+ in. striper will eat smb along with all the other fish in the river. They are the dominant predator.
