"60' not a difficult distance, you could do it in a cast... I think you probably have. :)"

Making sixty foot casts, and hitting a target, is by no means a cake walk. I'd venture to say that there are far less than 40% of the Forum members who can accurately throw 60' with relative ease.

If you take the time to actually measure out 60' of line you will see it is a significant distance. Also the ability to throw sixty feet on the grass is far less demanding than to throw that sixty feet while standing mid thigh in the river.
