Back in 2005 my FF mentor built a homemade strain out of a window screen. He placed the screen in a small gravel riffle and I scooted my feet across the bottom from above. The amount of midge larvae was astonishing to say the least. Hence my avatar name....

A fantastic set up for the gun is a tandem zebra midge size 20 or smaller. 24-28 is ideal if you can thread the eyes of the hook. Dark colors and white work best.

Black caddis larvae are devastating from March through December.

Fish one hook size smaller when fishing a hatch.

Move slow!
