7 weight is ideal, I think, but not necessary. You can get by with a 5 weight, but controlling the fish will be a strain at times. If you have a good day, your wrist and forearm may pay a price.

I agree with Jack, above. Your 5wt will work. Make a trip or two and find out what it's all about before buying a steelhead outfit. Save your money for now, learn a little about the game and buy a decent outfit that works well for you in the near future.
