thanks for the great advice guys ill most likely stick with my five weight to get my feet wet but i may upgrade my reel because im just not confident in the drag what i have is my only fly set up because i just started fly fishing in the last year so im still working with a 100 dollar rod and reel combo not that spending more money is always the answer lol so other than the bright color stuff what kind of "buggy" looking flies are productive?

thanks

adam
