Your S4 can be slowed down / softened by putting a 6wt line on it. If you use a SA GPX 5 line, it's basically a 5.5 - 5.6 line which will make the rod easier to load with less line out.

Your Scott says 5wt but it's pretty much a 6wt. Put 6 line on and fish it. Get yourself a more user friendly 5wt that can handle in close and at distance. The 2 rods I use on the D are both 9' 5wt (sage z-axis and st Croix legend elite). Actually prefer the St Croix over the Z-Axis. Both can move line and work well at shorter distance. I don't believe a 10' 4wt will be the answer for you. Just my 0.02

Not sure where you live but you are more than welcome to cast my gear or meet up on the D sometime and cast them.

PS. Do you know anyone with a power boat that might give Becker a ride in it? He's trying to make new friends.
