I've never heard the hexes called big slate drakes... That's a new one for me. But there's no such thing as "wrong" when it comes to common names. People use the term "sulpher" for bugs that aren't even in the ephemerellidae family, or "BWO" for bugs that aren't in the Baetiscadae family, etc.

As long as people recognize that hexes and iso's are very different, despite some using the common name slate drake for both, it doesn't much matter.
