BelAirSteve,

Yeah this guy was a big one. I would estimate if measured from tip of leg to tip of leg in any direction it was between 3 1/2 and 4 inches across.

Geo,

I did see plenty of trout that were hitting and slashing at Cicadas. But, the combination I was using was producing so many opportunities for me I just couldn't bring myself to change things up. I could tell some of the fish I caught had cicadas in them. However, I also watched many naturals drift over lots of great lies without even a look. I actually used the same two flies for the last four hours of fishing on Sunday. It was just a blast! Guess I'll have to pack my cicada flies away until the next brood shows up because I don't see myself getting back up to Clarks any time soon.
