Similar to ry guy - I attach empty spool to reel, attach to bottom section of fly rod. Hitch fly line to spool after passing through stripping guide.

Reel on fly line. Loop on backing. Fill to 1/8" of spool. Change spool on reel. Run backing through stripping guide, attach to 2nd empty spool with an arbor knot. Put a pencil through full spool, hold with feet, wind in.

I hold the line above the reel with a damp cloth to clean it whilst I reel in.

I make sure I always have one empty spool for just this purpose. I can respool a line n backing in under 10 minutes this way.
