After looking closer:

1 & 3. Not a good enough view of any of them.

2. Hex

5. Maccaffertium genus (cahill, not sure which species)

4 & 6. Not sure on either. Not great pics, and knowing size would help. Best guess for both is Maccaffertium genus (cahills, but could be multiple species of cahill)

I don't see any iso's. Nor do I see any sulphers (dorothea or otherwise). For instance, on #6, only 2 tails. So it's not a sulpher/dorothea.
