I carry three kinds of flies for bass, poppers, streamers and cray fish. These flies are good for smallmouth and largemouth. You can fish the crayfish by hopping it along the bottom or like a big nymph and dead drift it (tight line or under an indicator). Big nymphs will work too, but I generally don't use them. I tend to use nymphs when I fish a popper dropper rig. The nymphs are meant for blue gills, but i have picked up a few bass on them as well.
