If he is offering you hide/tail he already has then it's already been "tanned" Animal hide for the fly tyer is a no brainer, skin the animal, remove the fat that is attached to the skin and then salt down the hide. Or if your really lazy like me, you stuff the bird in the freezer and then remove the frozen bird to "pick at" the feathers you want while at the vice and then toss them back in the freezer when done. The wife just loves that one. LOL!

Hopes this helps,

Chris
