I wonder who built them? Novices? pros?

I know when I built my last/first rod I put way too much epoxy on my rod(covering up multiple bad epoxy jobs I ended up with 4 coats).

And the rod started at a 9.5wt but by the time it was finished it was a 11.5wt, I think the multi epoxy jobs had something to do with that.

But as soon as I get it im gonna measure it weight wise and ill post it. Then again when I finish it. And also line it with a few different lines. Though as im thinking now I may under line it, guessing how glass feels.

But ill keep ya posted.
