I used long webby hackle feathers for the claws and the tail. Sorry, I don't know what kind. I've had it for YEARS, the bag was unmarked. Some kind of brown hen hackle.

The body is brown chenille, hackle wrapped over the body, cut a strip of clear plastic, then wrapped that w/ a thin silver wire. Nothing fancy. I used turkey feather for the antenna. The tail is just a hackle tip.

Afish-yeah it casts a bit heavy. It's workable, but I definitely want to get some lighter eyes. I just used what I had laying around for the entire tie. It'll be a "bottom bouncing crayfish"!
