Great Fly and I liked the vid. Honestly, that combination of colors I've not tried, but will. To me, it's a Yuk Bug. I've been calling it the Yuk Bug 2 or Y.B.2.

The simplicity, cost, variations, availability of materials and time spent tying not to mention the overall effectiveness of the fly for different conditions and species make this a must have. I have dressed it up with an overback of thin skin and ginger chenille with a gold wire rib for an effective golden stone/ March Brown/ Grey Fox nymph. Covers many bases and ultra effective. Quck and easy is my kind of nymph. Under cold water conditions we push the limits of depth until ultimately getting tight. Many times we just don't get the fly back. I don't mind as much on a fly such as this. Great Fly and a must have. Larger size has overtaken the wooleybugger for me. I believe that says something for it's effectiveness.

The rubber legs create a unique sound footprint. I like to use the round rubber on the legs for that reason, it's more rigid. The Holschlag Hackle fly has become one of my favorite Bass flies and it exploits the same feature. A Clouser darter tied with rubber legs is an absolute summer killer.
