Chaz,I remember when the LL did n't flow like the muddy Mississippi every time it rains,it would get a milky green color.This was back a few years ago,like 50.There was lots of vegetation in many of the slower deeper sections thru out the parkway,now it's that silt you see today.The "grow zone" that the parks dept has gone to is a good thing,but the silt you see today is there because of upstream development not because of mowing the grass.Also,when the farmers pulled out all the fence rows and stopped strip farming and went to huge plowed fields there was nothing to stop that run off along the creek.By the way those stream improvements were installed by others not the parks dept.Some helped ,some did n't,and most have been degraded over the years.
