The last time I fished the Codorus was a number of years ago. I vividly remember fishing during a "release". I was catching a fair amount of small browns nymphing and didn't realize it was happening at first. I was on the opposite side of the stream from my vehicle and only wearing hip boots. I would say that the flow and clarity of the water changed very quickly. My focus quickly changed from catching fish to getting back to the other side of the creek. I managed to get back across but not without a wet a\$\$\$. That's what I would call a "release".
