The lake elevation is back to normal. Actually it at 289.96 ft which is slightly below summer pool of 290. Outflow will now equal inflow and the water temp should go down below 70°. Actually it has been a good water year so far. We did not have to put up with low water conditions which in face of the large number of 90° days we are having could have caused water temp problems throughout SE Penna and elsewhere.
