Big Spring has large native brookies...

This is true, there are several spring creeks (CV) that probably have some this size, but I'm talking about a freestone stream. That's what makes this native so rare. Like I said, in 30+ years of chasing wild trout, I've yet to see it's equal. Once in Sullivan county in the early 2000's I saw saw one that was around 16", but this one was a good bit bigger.
