Where did all the stocked fingerling rainbows go in a "historically" wild brown trout stream?

1 donegal gets poached hard

2 its habitat sucks

3 birds

4 its a brown trout stream

Why not stock fingerling browns on big spring and see how they fare?

Seriously why do this here and not clarks creek? Instead of using rainbows stock 10000 browns on Clarks and see the results.

Predetermined outcome? Fingerlings can't survive in a marginal at best stream. Why raise them at all?
