My guess is the number of wild browns has gone up because regular stocking of adult fish was stopped. Chances are the wild browns have been there a long time.

Exactly what I posted above which was Mikes thoughts on the matter as well. However, he did warn me not to get on the STOP STOCKING bandwagon. 😊

Did he say why NOT get on the stop stocking over wild trout bandwagon?

He just gave a very good reason to get on it.

They reduced stocking of hatchery trout over wild trout, and the population of wild trout increased.

Is anyone surprised by that?
