My guess is the number of wild browns has gone up because regular stocking of adult fish was stopped. Chances are the wild browns have been there a long time.

Exactly what I posted above which was Mikes thoughts on the matter as well. However, he did warn me not to get on the STOP STOCKING bandwagon. 😊

Not really.

PFBC does not consider RT to be more hardy then browns, they put them in streams with wild trout in them so they don't interfere with wild trout reproduction. That and the fact that the growth rate in hatcheries is faster.
