If you find that water temp is a problem in Muddy Ck when you arrive, then just go up the South Branch of Muddy Ck through the stocked trout stretch, which also harbors wild trout, or continue farther upstream (ask landowners). The farther up you go the better it gets. You may also wish to hit the stocked section of Leibs Ck, a trib to the S Br Muddy. It harbors a good wild trout population as well. Staying closer to Muddy, Orson Run, a near-by trib, also has an attractive wild trout population and was once stocked by a cooperative nursery. I am not certain whether the co-op stocks it at present. Again, it would be advisable to contact landowners.
