I am pretty sure I am one of the only flyfisherman that can't seem to catch a fish on sucker spawn...my patterns, bought flies, flashy patterns, crystal meth, doesn't matter, I can't catch a cold with them.

I do well on four flies...

bead head green and tan caddis
fluffy huevo (loosely tied egg pattern cream with orange dot)
rabbit leech patterns in grey, white, olive, black with flash
slumpbusters in Olive, white, and black

I have caught fish on small pheasant tails, serendipity, buggers...

I am stoked to try Zuddlers, had a great year on them on the Penn State creeks this year.
