If the PADEP tests the water and the air, and the results are that drilling DID NOT affect the water supply or were not affecting the air, what else would you have the DEP do?

How is the DEP supposed to "fix" something that did not occur? Once again, the news media "runs" with the anti drilling complaints and do not want to admit when they are wrong.

I saw this while I worked at DEP. They are being made a scape goat because the drilling IS NOT the evil activity that is being pushed by the anti drillers and the news media.
