Landing a big fish on the letort

Okay, so I paid a visit to the letort today, never fished it during the summer cause I heard its pretty bad we'll that true, insanely difficult. So I nymphed it floating a curly sighter down the rows of watercress. Caught one right off the bat, then went a while before hooking another. The second one I hooked was big. 24" plus had him on for a little and broke off. 6x and watercress don't mix too well.

So the big question I have is, is it possible to land a big fish on 6x Tippet with all that watercress in that creek. I kind of want to go back and try again. Maybe 5x but it won't sink as well.
