URL:

I did catch little brookies in klingermans but it was awfully small... people sometimes mention "jump across" brookie streams but klingermans may be "step across" maybe 6 ft average width... always the question of whether to move upstream, where these streams get steeper, but then they have even less water upstream...

if you put the names of several of these streams in the internet along with epcamr there is a good old report on them

that is the eastern Pennsylvania Coalition for abandoned mine reclamation

thanks for the remarks I was more interested in general comments on trying to choose streams from maps
