So how you guys save length on your leader. I'll buy a leader say 8 feet and fish it. I will tie it to my casting line, the thick green line. I will fish a fly not like a fly tie on a new one. Do it again now my leader is 7 feet long. Do it a few more times now 5 feet. And eventually I get to a point where I have a three foot leader which is unfishable. How do you prevent or fix this problem, am I missing something ?
