For you tippet ring guys...

What if I bought a 7' mono 3X leader and added a ring to the end of it. Would I be able to add 5X or 6X to the ring or do I need that 3X -> 4X -> 5X transition to smoothly cast it?

Right now I'm using a BlueSky light furred leader and add 4X, 5X, or 6X to the end of the leader depending on what the conditions require. It casts smooth. I'm curious if a similar setup with a tippet ring would cast as well. I'd like to try it b/c I like the advantage to add a dropper off the ring but want to keep the simplicity of adding whatever size tippet I want to at any given time.
