Wow! Where's my slide rule.

Afish, thanks for above. Very clear.

I've become a fan of tippet rings because it keeps the X-factor above it and the tippet below constant. I used to snip off the tippet from the extruded leaders I bought and tie a double surgeons and then keep snipping back as the tippet got shorter but began to see that after a few snips I wasn't sure exactly where I was on the leader taper. Still, as we all know, it's not quantum mechanics, but physics does play a big role. As noted above, tie a length of tippet larger than the leader above and lots of bad things happen. Tippet rings solve the problem for me without sacrificing presentation.
