URL:

Well, I've finally admitted it my eyes have been beat by the diabetes and I can't see crap anymore.

I'm gearing up with bifocals and magnifiers and all the old fart stuff. Can you please provide a loupe recommendation and magnification.

Criteria:

- 1) Should swing out of the way
- 2) Should have adjustable band (I have a clip on type and it gives me headaches)
- 3) Should be at least medium to high quality

I know some are going to say better lighting. I've got that taken care of!
