Thanks for the post. I contacted the Bureau of Abandoned Mine Reclamation about this as a result of your having included the links. The Bureau engineer was not aware of wild trout being in the Schuylkill or the fingerling stocking program there. I mention the Schuylkill because the discharge is not slated for Mill Ck; it is planned for the Schuylkill immediately below Pottsville. I think that the trout will now be a consideration as the plans for the discharge are developed.
