the weight reduction is about two tenths of one ounce... but if you think about it in terms of leverage, given the location, it actually makes a pretty big difference... weight removed from furthest distance from balance point... rod went from being tip light to just perfect.

I fished with the modified fly rod today it was just great for the very small brook trout streams I was fishing. 3 w line #14 Adams... balance just right.

have ordered another cheap one on the internet as backup and have the saw ready
