I cut my teeth on small infertile and unstocked NWPA brookie streams that were remote and very lightly exploited and have caught many big headed 5 - 6 inch trout complete with exposed gills.

You were saying?...

Why does it always have to be all or none with you?

You absolutely can manipulate a characteristic such as size through various harvesting practices. It is actually not difficult at all in an impoundment. But I do agree it would be extremely difficult in a highly fertile limestone spring creek.

But I certainly would not recommend a bunch of people on a chat board to start harvesting to improve the size because it would likely be much easier to screw it up than to improve it.
