Eat the brown and steelhead, release the Atlantic. .

no need to eat the browns bud. they forage in different areas to the Salmon - browns stay in 30ft-60ft of water just offshore whereas the Salmon go far out and very deep, they also spawn in different water.

salmon and trout (sea trout) co-exist all over the upper northern and southern hemispheres, big ones.

i'm not sure if an atlantic run would be truly sustainable alongside steelhead though ?
