Yeah, completely drying the gear will do it. Keeping in mind it can take weeks for felt soles to fully dry.

I've heard of people freezing it, not sure if that works.

Bleach works. I'd dry everything else, which dries quickly. If you have felt soles, get one of those little plastic tubs. Fill it a few inches deep with bleach and water mixed. Set shoes in so that it covers the felt. Leave for 20 minutes or so. Then rinse good with water. That oughta do it.
