Firstly, if your fishing for wild trout I would recommend 10ft leader minimum for dries and 9ft for wets and nymphs. People always say use the heaviest tippet/leader you can get away with, but I say use the lightest you can get away with. Trout fishing is "light fishing" and should be treated as such, unlike bass fishing where you use the heaviest you can get away with. Although, don't go tryin to cast to a 4lb brown with 6x tippet and expect to land him, that is, if your sight fishing. If you don't sight fish, then 5x is the way to go.
