What is this meeting about?

What issue or issues led to the calling of this meeting?

What options are under consideration?

I suppose it could be described as a chat session in the never ending drama that is Big Spring. There remains some disagreement among stake holders about how to move forward with management goals including issues such as balance of species (brooks vs bows), sediment control and removal plans, stocking, special regulations, reclamation of stream channel etc.

In short, it's much the same debate that was unfolding fifty years ago. There may be some new proposals/concerns coming from PFBC.
