Can we have it in English?

The English tye BWOs in size 12, why would you want anything "in English?"

That's because their natural BWO's are that size. They're related to Hendricksons, not to the bugs we mis-named BWOs.

The English have been fly fishing for brown trout for the better part of a millennium, and pretty much know what they're doing.

To answer the original question, I've been tying for almost 50 years, although I still buy maybe 5% of what I fish.
