hit "my" section again today 9-20. water temps are well down into the 60's. surface was pretty slow, but crystal buggers are still being taken, although not as assertively as earlier in the month. the fall fish have their feed bags tied on pretty tight. caught several 14-16" fish that appeared to beat equally as large smallies to the fly. the water was gin clear, just the way i like it. i'm hoping that i can get out again tomorrow before the rain.
