+1 Green weenie!

Why not fish IN the rain rather than after? This past weekend, Saturday evening was my only chance to fish. It happened to be a downpour at the time. I was able to get closer to a tree that is usually difficult to cast to and the fish tend to be spooky. My first cast caught me a nice wild brown about 16". I used an olive green weenie. I think that these big browns tend to be a little more careless when the rain is heavy.
