I'm kind of tired of paying 15\$ for flouro leaders for steelhead so I'm going to start tying my own. From tip to Butt, I would like the leader to be all flouro.

- 1) does anyone have a recipe they mind sharing that has worked well for them in the past?
- 2) what size line would you recommend to end on the tip, I normally use 4x or 5x flouro when steelhead fishing. so im guessing 6 lb flouro will do?
- 3) whats a good starting strength and diameter of for the starting taper?

I normally nymph but do swing from time to time. And I plan on just purchasing Pline Flouro, so brand isn't an issue, the line has never let me down.
