Fished from late morning to early afternoon. Water was low and super clear; 60 degrees. Leaves were a bit problematic at times. Mixed sun and clouds with little bug activity and only a couple sporadic risers. Caught more branches and roots than usual but managed to move about a doz. and a half fish. Landed a handful from 3-8" but missed and sighted several larger ones. Again, several year classes present, and one deep hole had a silly no. of fish, more trout than suckers and there were a bunch of them mixed in. Beautiful day to be out, and didn't see another angler. All fish were caught on a black ant. (wet)
