I enjoy fishing that area in spring for the stockies, and I always see a great little black stonefly hatch almost everytime I go in April and I've seen decent sulfur activity in may. I've also seen a few musky taken from that area. The smallmouth fishing is great there at bear-ass beach and upriver, but the best smallie water that I tend to fish is upriver 1 mile from west newton fished along the rocky shores near the railroad tracks.
