1st and 2nd for most streams.

maybe its based on supply and demand for each county area - i see that near me, EB of the Brandywine and Ridley creek will get fish this fall.

but White clay and Pickering creek won't.

swings and roundabouts no ?

i have no issue with stocked programmes being reduced to fund experimental attempts to develop self sustaining populations - long term that will leave more of my licence and tax dollars to go back into the stocked programmes and more importantly enforcement.

what has surprised me is that some ponds/lakes will get stocked at a time when many are putting away their boats....

I agree that maybe the creeks etc are a little low to be stocking this week but the water temps are right on the nail.
