Sculpins

I fished the first sculpin I tied using the Enrico Puglisi fiber brushes. I saw the tie on uTube. It makes a gill breathing effect. I got a small brownie on the GunPowder (MD) on my second cast with one. I know that sculpins swim and drop back to the bottom, that's how I got the brownie yesterday. But is there a way to tie them or fish them without getting hung up on the bottom as much? Or, does that just go with the territory? Thanks in advance.
