To clarify, at least from the best of my understanding, the above streams listed are currently stocked and currently have a Class A population of wild trout. I can only assume they were recently surveyed as being Class A. Unfortunately, the actual stream sections are not identified in the listing.

If the proposal put forth by the FBC (found in the OP) is approved, these streams will continue to be stocked. If not approved, stocking will cease in all the above streams since the current policy is to not stock Class A designated wild trout streams.
