Has any one fished the section of CC near Sherman St in York that is down stream from the Sprigettsbury Waste water treatment plant? I know CC from Rt 30 to Sherman is very deep and slow moving and is supposed to have a good supply of Small Mouth, Pan Fish, and Catfish.

I went to look at the CC yesterday down by John Rudy Park (Sherman St Bridge) and the water is clear but stained brown.

Any one ever fish the CC North of Rt 30 and down stream from the waste water treatment plant? What were your results? Any Trout?

Glen
