Fished the one with the sparsely spotted Browns down near the mouth this afternoon/evening. Got lucky and hit it pretty well with high, off color water and active Trout. Nothing of any size, but any fish out of this stream is a pretty cool thing. Lost one around 10" at my feet in the larger receiving stream and rolled a larger one in a slower section...low teens probably. Was swinging a Bugger...they all hit at the end of the swing...they're hard to keep hooked up that way but the take is very violent in high, off color water. They all hit like 20"ers
