The Conodoguinet has indeed been mighty low as TimB and others have pointed out on this forum recently. In the last 24 hours, levels have ticked upward but not as much as I'd hoped.

NS,

With respect to lower Letort, it always get a flush of litter from town and the Mully Grub after a storm and water conditions are often cloudy. If you get a chance, check it out today and see if the problem persists. Swattie may be right about aerated surface (that's what it looks like to me) but it wouldn't hurt to notify the local Area Fisheries Manager and DEP and email them the photos or a link to this discussion.

You can contact DEP at 717 705 4700

Now, if you return and see dead fish and it's obviously critical, call their hotline at 1 877 333 1904. The PFBC has a fish kill hotline too at 1 855 347-4545 as well.
